MSD: Tuberculosis Screening for Employees

To prevent the spread of tuberculosis and other communicable disease in schools, a new employee who has lived in a foreign country, except Canada, for six months or more within the last five years shall complete the District tuberculosis screening process. When the screening process requires a tuberculosis skin test or chest x-ray, results of a test or x-ray completed after arrival in the United States must be presented to the District before the employee begins work.

The District may also require a current employee who has lived in a foreign country, except Canada, for six months or more within the past five years to complete the applicable tuberculosis screening form and provide required test documentation under District procedures.
