MSD: Tuberculosis Screening for Students and Re-Enrolling Students

In addition to communicable-disease reporting and exclusion requirements stated above, the District shall administer local tuberculosis screening procedures for students as part of enrollment and re-enrollment health review.

The District shall require the Tuberculosis Screening Student Enrollment Form during online registration for all new students and students re-enrolling in the District. The screening process shall identify students who are foreign-born, except students born in Canada, and students who have lived in a foreign country, except Canada, for six months or more within the past five years.

When tuberculosis screening indicates that a TB test or chest x-ray is required, the results of a tuberculosis skin test or chest x-ray completed after arrival in the United States must be presented before the student begins attending school, unless current law or a public health official directs otherwise.

The school shall coordinate tuberculosis screening and any related exclusion or re-admission direction with the local health department, the Utah Department of Health and Human Services, and the student records and admissions procedures applicable to enrollment.
