MSD: HIV-Related Record Access, Training, and Confidentiality

Student HIV, AIDS, ARC, and related medical information shall be treated as confidential student information and handled consistently with FERPA, Section 504, District student-record policy, and applicable public health reporting requirements.

A school employee may access a student medical record maintained by the District only when the employee has a legitimate educational interest, is authorized for access under federal and state privacy law, and has completed in-service training on HIV infection when such training is required for access to the record.

The District shall administer HIV-related record access in a manner that protects student confidentiality, limits disclosure to authorized personnel and legally required public health reporting, and coordinates with the District universal-precautions and bloodborne-pathogen training framework.
