MSD: Extracurricular Random Drug Testing Program

Millard School District maintains a Board-approved educational drug testing program for students in grades 9 through 12 who participate in extracurricular activities designated by the District. Before a student participates in a covered extracurricular program, the student and the student's custodial parent or lawful guardian shall execute and deliver the District drug-testing consent form to the local high school. A student who refuses to provide consent, refuses to comply with testing procedures, provides a false sample, tampers with a sample, or otherwise obstructs the accuracy of testing may be suspended from extracurricular participation according to District policy.

Random testing may be conducted during the activity season at a frequency determined by the District. Student selection shall be by lottery from the pool of covered student participants, with reasonable steps to maintain the integrity, confidentiality, and random nature of the process, including adult observation of the drawing process and secure handling of assigned participant numbers. Testing shall be administered through a professional testing service or other District-approved testing provider.
